

Fun Glass Project!

Where Science and Art come together in one amazing experience!

Our class is welcoming Glass Art Projects into our classroom for a very special project on _____(date)

This project is an introduction to the ancient art of glass fusing. Children learn layering and assembly techniques as well as technical and scientific aspects of melting glass. Everyone will design and create his or her own unique art-glass tile or sun-catcher that they will be very proud of. Children will use glue and tweezers to assemble their collages, which are then sent to the glass studio to be fired in a kiln. Finished projects will be returned to the Class for the students to take home and be admired by all!

Please send in a donation of \$_____ to offset the cost of this very exciting project.
